## Tack Probability

If you toss a tack in the air it canland in two different ways:

1) on its fead
2) on its side

Which way do you think it will land most? $\qquad$
Why? $\qquad$

Toss the tack 100 times and record which way it lands. Ulse the chart below to tally your results.

| 1 |  |
| :--- | :--- |
|  |  |
|  |  |

How many times did it land on its head? $\qquad$
How many times did it land on its side? $\qquad$

Considering that this experiment is a good representation of the probability of tack landings...

1) What is the probability that any given tack will land on its head? $\qquad$
2) What is the probability that any given tack will land on its side? $\qquad$

Conclusion:
$\qquad$
$\qquad$
$\qquad$
